Patented models of the PadHead™ polishing & grinding head

Faster Grinding! ... up to 50% faster
Reduced Dust Particles/Slurry
Low Cost per Square Foot
Highest Quality Finish

Model II as applied on a Patch Kit & for flat polishing machines

Model C for CNC machines

Multiple Materials:
- granite
- concrete
- marble
- limestone
- engineered stone
- sandstone, & more...

Features of Model I include:
- Self-leveling floating heads
- Follows contours for serp tops & top polishers
- Velcro attachments

WHY UNIQUE & REVOLUTIONARY?
The THEORY: Traditional polishing systems force abrasives in one direction creating dull cutting forces resulting in fractured crystals. PadHead™ wears the crystals, rather than fracturing them, providing a more brilliant finish with greatly reduced dust and slurry accumulation.

Miles Supply's PadHead™ polishing & grinding head is the most unique tool on the market for surface treatments. Some models are designed to polish or hone flat surfaces. Model I works great on serp tops. They all utilize multiple free rotating heads working off of the resistance of friction principle to accomplish its superior surface cutting action.

- Velcro attachments for most common wet polishing pads and abrasives.
- Maximize production and quality on your radial arm or single head bed polishing machines.
- Up to 50% faster using conventional wet diamond pads than traditional abrasives and plates!

Used by Countertop Producers, Restoration Contractors, Monument Manufacturers, Slab Producers, and Concrete Polishers.

Utilize your CNC machine for top polishing or honing with the spring loaded Model C.
